Summary

- Full-Stack Developer with production experience across both backend and frontend, currently leading backend development for a multi-vertical travel commerce platform serving 10,000+ active users. Builds with React, Next.js, Node.js, NestJS, and React Native, backed by PostgreSQL, Prisma, and Redis. Comfortable across the full lifecycle — from UI to APIs to deployment.

Skills

- Frontend: React.js | Next.js | React Native | TypeScript | JavaScript | Redux | HTML | CSS
- Backend: Node.js | Express.js | NestJS | Golang | REST APIs | Socket.IO
- Databases: PostgreSQL | Prisma ORM | Supabase | MongoDB | Redis | SQL
- Architecture & Infra: Layered Architecture | API Aggregation | Idempotency | Docker | Docker Compose | PM2 | Nginx | Ubuntu VPS | GitHub Actions CI/CD
- Security & Integrations: JWT | OAuth 2.0 | HMAC | AES-256-GCM | bcrypt | Helmet | CORS | Rate Limiting | SATIM | AI Vision APIs | Firebase Admin | SendGrid | Google Maps API | Bull | Joi | Swagger/OpenAPI
- Languages:** Arabic | French | English — Professional proficiency or above

Experience

Backend Developer	<u>Fennec Booking</u>	<i>Oct 2025 - Present</i>
- Designed, built, and operate the production backend for a multi-vertical travel platform serving 10,000+ active users across flights, hotels, transfers, packages, e-visa, eSIM, insurance, and ferries. - Architected a layered backend with unified booking and payment flows that normalize multiple third-party travel providers for web and mobile clients. - Integrated SATIM payments and built pricing, commission, reconciliation, wallet, and queued mobile top-up workflows. - Built scalable real-time customer support using Socket.IO, Redis Pub/Sub, PM2 clustering, presence tracking, and Postgres LISTEN/NOTIFY fallback. - Implemented Bull/Redis background jobs with retries, delayed processing, and crash/deployment recovery for transient operations. - Implemented production security: JWT/OAuth, HMAC request signing, AES-256-GCM encrypted handoffs, strict CORS, Helmet, rate limiting, and server-side price validation. - Integrated an AI-powered vision API for structured passport data extraction; deployed via Docker, PM2, Nginx, Ubuntu, and self-hosted GitHub Actions CI/CD.		
Freelance Full-Stack Developer	<u>Self-Employed</u>	<i>2022 - 2023</i>
- Built fast, dynamic websites for independent clients using the MERN stack (MongoDB, Express.js, React.js, Node.js). - Delivered end-to-end projects including a book printing shop website, a library management website, and a clothing e-commerce site — covering UI, backend APIs, and database design.		
Backend Developer — Academic Project	<u>Driver Mobile App</u>	<i>2021 - 2022</i>
- Built the backend and server/client logic (CRUD processes) for a mobile app helping drivers locate exact places, plus supporting front-end pages. - Used Node.js/Express for the server, MongoDB for data, and React Native for the mobile front-end, integrating Google Maps and other APIs for location accuracy.		

Projects

- Algerian Offline Maps Application:** JavaScript mapping app for Algeria with location discovery and offline-oriented access to hotels and parking.
- Travel Agency SaaS / ERP & CRM:** Designed SaaS architecture for Algerian travel agencies, including booking, CRM/ERP workflows, dashboards, and service integrations.

Education

<u>YAHIA FARES UNIVERSITY OF MÉDÉA</u>	<u>MÉDÉA, ALGERIA</u>	<u>2023 - 2025</u>
Master 1/2, Systems Engineering and Web Technologies (2023-2025): Advanced coursework in distributed systems, software architecture, and web technologies. Bachelor's Degree (Licence), Computer Systems (2023): Core foundation in programming, databases, and computer systems.
