SAFIDDINE ABDELFETAH

Full-Stack Developer | Node.js | React | LLM Applications

Médéa, Algeria | +213 659 235 442 | fettahsafi.6@gmail.com

LinkedIn | GitHub | Portfolio

Summary

- Full-Stack Developer building production backends and AI-powered applications. Runs backend development for a live travel commerce platform serving 10,000+ users, with Master's-level research in LLM agents (RAG, LoRA fine-tuning) delivered as a working mobile and web product.

Skills

- Stack: React.js | Next.js | React Native | TypeScript | Node.js | Express.js | NestJS | PostgreSQL | Prisma | MongoDB | Redis
- AI / LLM: LLM Agents | RAG (LangChain, FAISS) | LoRA Fine-Tuning | Model Quantization | Hugging Face | Prompt Engineering | Python
- Systems: Layered Architecture | REST APIs | Socket.IO | Docker | CI/CD | JWT/OAuth | Encryption | Rate Limiting
- Integrations: SATIM Payments | AI Vision APIs | Supabase | Firebase | Google Maps | SendGrid
- **Languages:** Arabic | French | English — Professional proficiency or above

Experience

Backend Developer **Fennec Booking** *Oct 2025 - Present*

- Backend development for a live, multi-vertical travel platform (flights, hotels, transfers, packages, e-visa, eSIM, insurance, ferries) serving 10,000+ users.
- Built core payment and booking infrastructure, including third-party provider integration and SATIM payment processing.
- Delivered real-time features (Socket.IO, Redis), production-grade security (JWT/OAuth, encryption, rate limiting) and AI-based document data extraction.
- Deployed and maintained the platform using Docker, Nginx, and CI/CD on a self-managed Ubuntu VPS.

AI Research — Master's Dissertation **Yahia Fares University** *2024 - 2025*

- Co-developed an LLM-agent platform for psychological assessment: four specialized agents (query formatting, therapeutic dialogue, sentiment analysis, clinical report generation), with a React Native patient app and a Next.js clinician dashboard on Supabase.
- Fine-tuned LLaMA 3.2 with LoRA on psychotherapy datasets, built a RAG pipeline (LangChain, FAISS, Sentence Transformers), and used a quantized Mistral 7B for report generation.
- Evaluated models against base versions using cosine similarity, LLM-based judging, and accuracy/precision/recall/F1 metrics.

Freelance Full-Stack Developer **Self-Employed** *2022 - 2023*

- Delivered MERN-stack websites for independent clients, including a book printing shop, a library management system, and a clothing e-commerce site, covering UI, backend APIs, and database design.

Projects

- **DZ-AutoImport:** Next.js showroom and import-brokerage website for Algerian car buyers.
- **Algerian Offline Maps Application:** JavaScript mapping app with location discovery and offline-oriented access to hotels and parking.
- **Driver Mobile App (L3 project):** React Native app with a Node.js/Express/MongoDB backend and Google Maps integration for locating exact places.

Education

YAHIA FARES UNIVERSITY OF MÉDÉA *MÉDÉA, ALGERIA* 2023 – 2025

- **Master 1/2, Systems Engineering and Web Technologies (2023–2025):** dissertation on an LLM-agent psychological assessment tool.
- **Bachelor's Degree (Licence), Computer Systems (2023)**
